ABOUT US

SpeechRighter Plus is a private therapeutic learning center, comprised of a dynamic team of licensed & certified speech-language pathologists and occupational therapists, under the clinical leadership of Director, Cristienne Colip, M.S., CCC-SLP

WHAT MAKES US DIFFERENT

Our team is committed to a holistic approach, working with parents, caregivers and other professionals, to provide support and guidance as we collaboratively work toward meeting your child's communication, motor skills, & independence goals.

We view acquisition of skills as a developmental continuum with the role of the therapist as a facilitator, utilizing evidence based practices while being the visionary that moves the individual along the continuum, as they acquire the building blocks of abilities that lead to the eventual mastery of goals.

- **Social Skills Tool Box**
- **Effectively Listening**
- **Perspective Taking**
- **Rules of Conversational Speech**
- **Problem Solving for Social Scenarios**

BRAINWAVES

Based on years of scientific research, BrainWaves training programs develop and strengthen the memory and sequencing skills, attention, auditory processing, and language skills essential for personal and academic success.

FastForward programs build an individual's learning capacity through exercises designed to improve **memory, attention, reading skills** (*vocabulary, phonemic awareness, decoding, fluency, comprehension*), **brain processing speed** and **accuracy**.

CogMed is a neuroscience based training program, designed to sustainably improve ones **working memory**. Improved working memory capacity generalizes to improve **attention** & **focus**, **organizational skills**, and **impulse control**.

The Reading Assistant program supports and corrects students as they read aloud. Reading aloud with this program trains the brain to *process information more efficiently*, and builds **reading confidence, vocabulary, fluency,** & **comprehension.**

The Listening Program uses music & sound therapeutically to improve **auditory processing, communication skills**, and general **mood/wellbeing**. Research has confirmed notable improvement in *auditory skills and sensitivities* for children with ASD, Down Syndrome, and sleeping disorders.
